Recommendations

Presseko sp. z o. o. [Ltd.] gives recommendation to CleanBacter Institute of Microbial Technologies sp. z o. o. [Ltd.]

Presseko was created to protect the environment.

At present, we have one of the largest hazardous waste disposal plants, which are being processed by physico-chemical treatment. We work with research units from all over the country, what allows us to continuously improve our processes and introduce new solutions in the field of environmental protection and waste management.

Establishing cooperation with CleanBacter has extended our possibilities of utilizing waste with a biological method. Eco-pH agents fit into our wastewater treatment process. The use of Eco-pH agents significantly improved the purity and quality of treated water and wastewater.

We intend to increase the scope of cooperation with CleanBacter, and thanks to our cooperation with research units, we want to develop an innovative approach based on Eco-pH
